

To help you buy the right plant for the right place, we need to know the following:

- Where are you located?
- Which hours during the day does the area get direct sun during the growing season?
- Do you have deer, rabbits, pets, or pests in the area?
- What is your soil type and drainage?
- How windy is the planting area?
- Does the area have naturally consistently wet or boggy soil?
- Do you have allergies to specific plants or have other characteristics of plants you wish to avoid such as thorns?
- Are there any specific characteristics you are hoping to find? Such as specific bloom color, foliage texture, ultimate size, etc.

Below or on a blank page, sketch out the approximate size of the planting area or list dimensions.
